

15001 and 15002

## TECHNICAL SUPPORT OF OPERATIONS

### Selection of Sebree Line Four Technology

A Tucson representative participated in a task group to study and recommend technology for a possible potline expansion at Sebree.

### Mitsubishi Technology Implementation at Columbia Falls

Tucson representatives were active in a technology exchange with Mitsubishi at Columbia Falls. A trip was made to Mitsubishi facilities in Japan to study their carbon laboratory equipment and procedures. Detailed plans were made to develop similar capabilities at Tucson in 1984.

### Large Area Anode Project at Sebree

Tucson performed extensive tests on samples from regular and large area anodes to evaluate the consequences of changes in manufacturing practices.

### Raw Material Quality Control

A joint study of Sebree raw material quality control procedures and equipment was conducted by Sebree and Tucson personnel. A joint report was issued.
